

ABSTRACT OF THE DISCLOSURE

5 A content distribution system, capable of creating content and
changing itself easily, is provided. In a content server 30, contents
created by data written in the basic language, which can easily be
converted into other languages, are stored. The content server 30
10 identifies the type of a terminal device accessing thereto. Content being
requested is converted into data written in a display language
appropriate for the terminal device on a real time basis and the
resultant data is transmitted to the terminal device. At the terminal
device, display according to the display language data is carried out.
